Congratulations on completing Module 3

After all your learning and practice in this module, you should be able to:

- Confirm that Python 3 is correctly installed.

- Navigate to folders on your computer using the command line.

- Create Python scripts and run them in the terminal.

- Perform basic programming tasks using conditional statements and lists.

- Read and extract data from CSV files with Python.

- Zip two lists together.

- Create and execute Python functions.

- Create and use data structures like lists, tuples, and dictionaries.

- Create and use decision and repetition statements.

- Create and use Boolean and logical operators.

- Add, commit, and push code to GitHub from the command line.

Take a few minutes to reflect on your learning:

- What new topics did you learn in this module?

- How has your understanding changed or evolved?

- What are you wondering about?

- What questions do you have?

You will continue to build your knowledge and skills throughout the boot camp. If you have any outstanding questions about the content in this module, please reach out to your instructional team.
